

## Black Gator® Pod Sleeve Handling & Pod Pressure Test Tool

The Black Gator® Pod Sleeve Handling & Pod Pressure Test Tool is used prior to installing the electrical submersible pump (ESP). The handling tool is made up to the pod sleeve assembly on the pipe deck. The handling tool has a dummy coupling for picking up the pod assembly with elevators. Once the pod sleeve assembly is made up to the pod casing, slickline equipment can be made up to the handling tool. A standing valve can then be set in the tailpipe nipple assembly. Once set, the top connection of the handling tool can be made up to the rig Kelly hose. The pod casing can then be filled and pressure tested with the cementing unit.

### FEATURES

- Top box connection allows for make up to a drill pipe well control crossover
- Dummy coupling shoulder for elevators
- Quick union for make up to pod sleeve

### SPECIFICATIONS

- Low alloy steel or 13Cr material options
- 5,000 psi MWP

Part Number	Pod Size (in.)	Upper Box Thread (in.)
